Peptides derived from Japannese cedar pollen antiquens are immunotherapeutic agents - useful for allergy treatment and typing flat and lass in molecules in allergy sufferers.

Into class in molecules in allergy sufferers claim 12, page 28: 50pp Japannese is a peptide of the invention. The peptides are derived from Japannese cedar police antices, and are issed as immunotherapeutic agents in treatment of allergy. The pertides can be used for identification and treatment of allergy. The pertides can be used for identification and typing of the particular MiA class II molecules in an allergy sufferer, and also for peptide immunotherapy of an allergy to the requirements the individual patient, allowing more effective treatment of an allery, including those patients for whom treatment with a conventional immunotherapeutic agent is ineffective.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        W80339-58 represent epitopes for T cells, derived from the sudi allergen proteins Civil (W80379-44) W80350-53 and W80355-58) and Cryj2 (W80345-49 and W80354-45). The peptides are useful for the treament of sugimpolitions is, an allergic reaction of the body to pollen. Sequence: 17 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

T-cell epitope peptide 24 from Japanese cypress pollen antigen Chaol.
Japanese cypress pollen, antigen: T-cell epitope: Claol: Chao2;
diagnosis: aliergy: spring tree pollen disease: pollinosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Scro

Modified Cryptomeria japonica (Cry j) ; peptide(s) - useful for treating allergy to japanese cedar polien allergen or treating allergy to japanese cedar polien allergen or mimunologically cross reactive allergens

Disclosure Figure 2: 60pp; English

Novel peptides of cry j) ; have been modified as a part of a preformulation scheme to develop an optimised drow product for theraperity treatment of humans siterily from allery to japanese cours policy allergen or an allery manner of immunication of the product to the product formulation when it is defined better allery product formulations. Such them princely recess reactive allery product formulations. Peptide fragments of Cry j, modified and unmodified and unmodified, are given in REA49; RRE555. This peptide fragment corresponds to anino acids 21:-230 of the allergen mature
                                                        Claim 1. Page 27-28: 71pp: Japanese.

Claim 1. Page 27-28: 71pp: Japanese.

Claim 3. Page 27-28: 71pp: Japanese.

Claim 4. Page 27-28: 71pp: Japanese.

Cypress pollen antigen Chao! The present invention describes profiters which correspond to the Tree! epitope sites on Japanese cypress pollen antigens. Chao! and Chao2. The peptides can be used as a reasont for the diagnosis of allergy to Japanese cypress pollen, and as an activient in the treatment and prevention of spring tree pollen disease in which in pollinosis involves reactivity to Japanese cypress pullen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ċ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ġ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sapo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Cry i I Japanese Cedar polien allergen peptide fragment (CJI-22).

Cry i I: Japanese cedar poli : allergen. modified: drug production.

Blergy: Crytpomeria japonic.

Crytpomeria japonica.

allerqy Claim 1:

```
The sequence is that of us collect peptide of the languese redar police allerges Cry [1]. The pertide, CJI-43.12, can be ised for the treatment and disancess of alterates associated with Jaranese cedar police. It has enhanced therapeutic properties but reduned side effects compared to naturally occurring allergens.

Antigens derived from Japanese codar pollen alleigen GTY:::-
contain at least two 7 cell epitope(s), used to treat or diagrose
                                                                                                                                                                                                                                                           allergy

Claim 76. Fig 18: 137pp: Enables

The sequence is that of a. 1913 Hd peptide of the Japanese cold:

pollen allergen Cry 3 in The Peptide, C31-43.9, can be used for
the treatment and diagnosis allergues associated with Japanese
cedar pollen. It has enhanc therapeutic properties but indiana
side effects compared to na ally occurring allergues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Antigens derived from Japanove cedar pollen alleigen Cry \beta is contain at least two T cell spitope(s), used to treat or diagnose

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                    claim!; Fig 13: 137pp: English.
The sequence is that of an isolated peptide of the Japanese cedar pollen allergen Cry j I (amino acids 21:123). The spetide, CJI-22, can be used certhe treatment and diagnosis of allergies associated with Japanese cedar pollen. It has enhanced therapetic properties but reduced side effects compared to naturally occurring allergens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Contain and the state of the United Peptide of the Japanese redated alleray claim 76: Fin 18: 187pp: English described of the Japanese redated pollon allergen Cry 1. The peptide, CJI-43.10, can be used for pollon allergen Cry 1. The peptide described with Japanese redar pollon. It has enhanced therapeutic properties but reduced side effects compared to naturally occurring allergens. Sequence 26 AA:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    10-JUL-1992: W0-COS661.

Claim 76: Fig 18: 137pp: Enalish.

The sequence is that of an isolated peptide of the Japanese cedar polien alteren by 1. The peptide, CJI-43.8, ran be used for the treatment and diagnosis of altergies associated with Japanese cedar poller. It has enhanced therapeutic properties but reduced side effects compared to naturally occurring altergens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               allergy

Claim 70: Fig. 181 187 pp. English.

Claim 70: Fig. 181 187 pp. English.

The segment is that of an isolated peptide of the Japanese codar police, allerance 187 i. The peptide, CJT-43.11, he isolated police, allerance 187 i. The peptide, CJT-43.11, he isolated the cedar police, it has enhanced therapeutic properties but reduced side effects out alleranced therapeutic properties but reduced side effects outside to naturally occurring allerance.

Antigens derived from Japane - cedar pollen allergen (19 ): contain at least two T cell (pitope(s), used to treat or diddn so
                                                                                                                                            dilergy
Claim 76: Fig 18: 137pp; Eng 'sh.
The sequence is that of an isolated peptide of the Japanese reda:
polier allergen Cry 1 1. The peptide, CJI-43.7, can be used for
the treatment and diamosts of allergies associated with Japanese
cedar pollen. It has enhanced therapeutic properties but reduced
side effects and an additional transfer occurring allergens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Antigens derived from Japanese Gedar pollen allergen Cry ) i contain at least two T coll epitope(s), used to treat or diadonise
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 76; Fig 18: 137pp. Endiss.

He sequence is that of an iscard population the Japanese refus policy allotype fry [1]. He politice of the Japanese from the treatment and diamons is a letter associated with Tiplese.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ocear policy. It has enhanced to deposit a proporties but indicading side effects compared to nationally consisting affectacis.

Claim 12; Page 28; 50pp; Japanese.

This sequence represents residues 211.225 of the Cry j l protein, and is a peptide of the invention. The peptides are derived from Japanese cedar pollen antigens, and are used as immunotherapeutic agents in the treatment of allergy. The peptides can be used for identification and typing of the particular HLA class II mollecules in an allergy sufferer, and also for peptide immunotherapy of an allergy. Using these peptides the immunotherapy of an allergy using these peptides of the individual patient, allowing more effective treatment of an allergy including those paties is for whom treatment with a convectional immunotherapeutic agent is ineliective.
 W80339-58 represent epitopes for cells, derived from the suminalience proteins Cryll (M8038-44, M80350-53 and W80356-58) and Cryl2 (W80345-49) and M80354-55). The peptides are useful for the treatment of sugirpollinosis, an altergin reaction of the body to pollen.

 Contain and the control of the Capanese cedar allersy claim 76: Fig 19: 137pp; English.

The sequence is that of an isolated peptide of the Capanese cedar polich aliergen fry j L. The peptide, COI-43.12, can be used for polich attentions of allergies associated with Japanese cedar polich. It has enhanced therapeutic properties but reduced side effects compared to naturally occurring allergens.

Socience 26 AA:

Variance 65 008; scal. 0,308 Milan 20, 352; Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Wodified Cryptomeria japonica (Cry)) I peptide(s) - useful for treating allergy to japanese cedar pollen allerges or treating allergy to japanese cedar pollen allerges or immunologically cross reactive allergens.

Siccoure: Figure 2: 60pp: English.

Siccoure: Figure 2: 60pp: English.

Novel peptides of cry) I have been modified as a part of a preformulation scheme to develop an optimised drug product for therapeutic treatment of humans suffering from allergy to Japanese cedar pollen allerges or a liergen which is immunologically cross reactive with Japanese cedar pollen allerges. Such modified pertides possess certain characteristics which render them particularly cross suitable for drug product formulation. Peptide fragments of 7ry 3 to modified and unmodified, are aiven in R82491-R82525. This peptide fragment corresponds to amics acids 71-90 of the allerges mature

New peptide(s) derived from cedar pollen allergens - activate allergen-specific T-cells, but not allergen-specific IgE antibodies, used for treating cedar pollinosis
Claim 5: Paperides 11-32: JSpp: English.
Synthetic peptides based on portions of cedar pollen allergens A (R81585) and B (R81587) were tested for their ability to activate cedar allergen-specific T-cells. but not allergen-specific IgE antibodies. 6 Peptides (R81580-R81585) were identified as T-cell epitices. These peptides, plus subsequences (R81573-79) essential for T-cell recognition, and homologues peptides (R81588-895) can be used as immunotherapeutic agents to treat or prevent cedar believes, avending side-effects such as anaphylaxis.

N-PSDB: 055271. Antigens derived from Japanese redar politen allergen Cry _{\rm S} : contain at least two T cell epitope(s). SPB to treat or discusse
 Discissure: Fig 4: 137pp: Enaissh.
The sequence is that of the Laganuse cedar police allocace.
Cry ji which contains at least two T cell epitopes. Peptide antigens derived from it can be used to: the treatment and diagnosis of allerques associated with Capanesse cedar pollen. The peptides have enhanced thoraperitie properties but reduced side effects_compared to naturally occurring allergers.
